Project Opelus

An API-based Anime logistics framework

Synopsis

Project Opelus has been undertaken to develop an API-based search engine that searches for Animes to render various anime logistics on the same page.
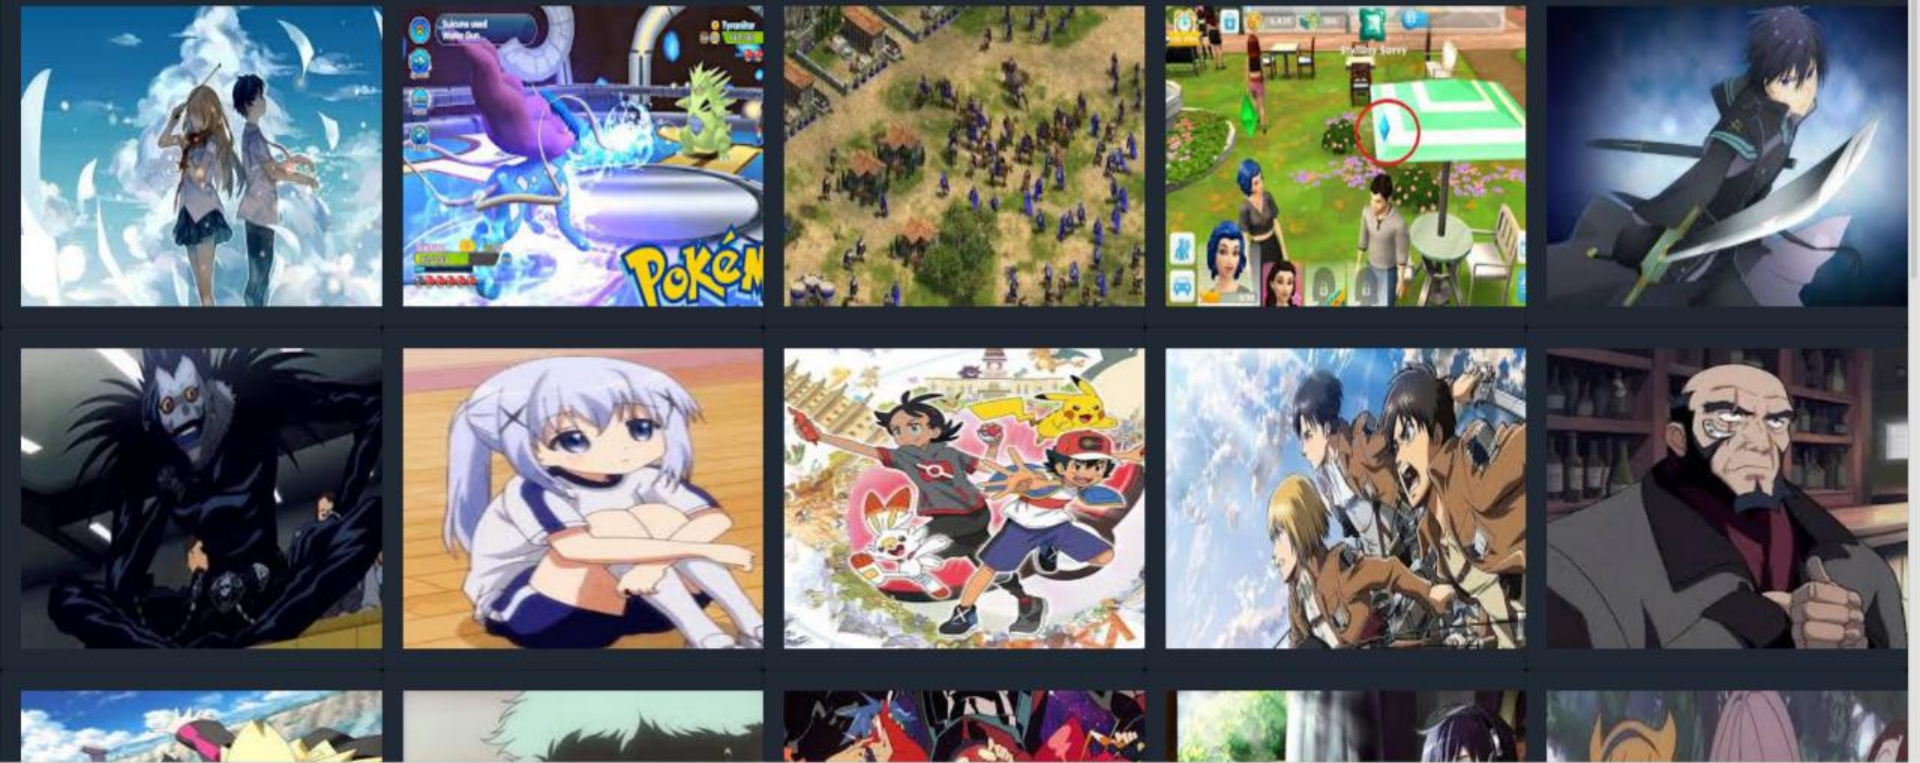

We offer a compact page structure that aims to display custom info on selected animes in a single page.

Sit back and enjoy your favourite Animes without roaming around on Google.

HOME

Welcome to Project Opelus

Here you can store information about the animes you have watched and the games you are playing

Abstract

Concept

Ever wondered about the need to go to gran'ma Google to search your favourite animes, wait for search results, then click on the first two useless links to see repeated info on these redundant pages.

Pop comes Project Opelus, founded and orchestrated by our very own team of first year undergraduates, we aim to kill the middleman between you and the anime video.

Whoosh!

What is wrong with my current way of searching anime?

OK, Boomer.

Here is a List of trending
Animes & Games

Anime

Fullmetal Alchemist: Brotherhood	Steins;Gate	Hunter x Hunter (2011)	Gintama°	Shingeki no Kyojin Season 3 Part 2

Loved it?

Because that's not all we have.

Woah! You've got all this on board! Seriously?

- Random Anime generator
- Random Manga generator
- Trending Animes right now
- An immersive search experience tailored to your needs
- Fabulous tiled graphics created using eye-appealing templates
- Need we say more!

Noone:
Literally Noone:
We:
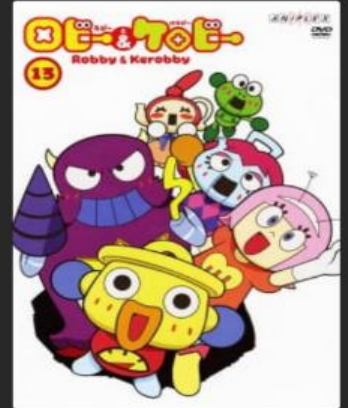

Prospects

Now, that we know this ain't any mean feat, it's time to move on to some of our future ideas :

1. Cross-platform Integration for wide accessibility.
2. Generative adversarial networks. We aim to create one for developing vivid Manga characters based on user search patterns.
3. We think a revolution is coming. By using cutting-edge artificial intelligence and novel analysis techniques employed about to be employed by team Opelus, we can bring about transformative change in the way we watch anime.
4. AI-based framework to generate custom anime titles suited to user's taste
5. Technology enabling us to authenticate systems and users.
